

I need to create an icon for the COIN Feedback app.

It needs to be modern aligned with Apple Design for iOS 26 and the file produce needs to be an square, not the icon itself

Got it — you're designing the **source icon artwork**, not the clipped App Icon 👍

That's exactly the right mindset for modern Apple-style icons.

Below is a **clear, iOS-26-aligned spec** you can hand to a designer or use directly in Figma / image generation.

COIN Feedback — App Icon Design Direction (iOS 26)

1. Canvas & File Requirements (very important)

- **Canvas:** Square (1:1)
- **Recommended working size:**
 - 1024 × 1024 px
- **Format:** PNG (no transparency at edges)
- **NO rounded corners baked in**
 - Apple applies the mask dynamically
- **Safe area:**
 - Keep main symbol within ~80–85% of the canvas
 - Avoid touching edges

Think of this as **icon artwork**, not the final icon.

2. Visual Style (Apple iOS 26 aligned)

Target vibe:

- Calm
- Trustworthy
- Premium
- Subtle depth (not flashy)

Design language:

- Glassmorphism / Liquid Glass
- Soft gradients
- Minimal abstraction
- No text
- No sharp outlines

Avoid:

- Flat 2018-style icons
 - Hard shadows
 - Skeuomorphism
 - Overly literal icons (no envelopes, no pens)
-

3. Symbol Concept (COIN Feedback)

You want something that implies **structured feedback**, not “email” or “chat”.

Best directions:

Option A — Abstract Speech Coin (Recommended)

- A **rounded disc** (coin metaphor)
- Inside: a **minimal speech-bubble cut** or indentation
- Feels like feedback + value

Option B — Stacked Feedback Layers

- 2–3 translucent rounded shapes
- Slight vertical offset
- Represents:
 - Context
 - Observation
 - Impact
 - Next steps

Option C — Focus Dot + Echo

- Central soft circle
 - Subtle echo/ripple layers
 - Suggests “feedback given → impact created”
-

4. Color Palette (Calm & Professional)

Pick **one main palette**, not multiple accents.

Good Apple-aligned options:

- **Blue → Indigo gradient**
 - #3FA9F5 → #5B5AF7
- **Teal → Blue**
 - #2EC4B6 → #3A86FF
- **Neutral Glass**
 - Frosted white + subtle tint

Tips:

- Use **radial or diagonal gradients**
 - Add very light noise (1–2%) for depth
 - Avoid pure black backgrounds
-

5. Depth & Material

Use **soft realism**, not heavy effects:

- Inner glow (very subtle)
- Frosted glass blur
- Gentle highlight at top-left

- Shadow *inside* the object, not behind it

If you're thinking:

"Is this too subtle?"

You're probably doing it right 😊

6. What to Export

Final delivery should be:

- `coin-feedback-icon-source.png`
- 1024×1024
- Square
- No rounded corners
- No alpha on edges

Apple will generate:

- iPhone
 - iPad
 - macOS
 - watchOS
- automatically from this.
-

7. If you want, I can...

- Write a **perfect image-generation prompt** (DALL·E / Midjourney / Firefly)
- Design **3 distinct icon concepts** (A/B/C) so you can test
- Adapt it visually to match your **Liquid Glass UI**
- Validate contrast for **Dark Mode + Light Mode**

Just tell me which one you want next 🙌

Can you create the prompt from DALL·E?

A modern iOS app icon source artwork for a professional feedback app called "COIN Feedback".

Design a square 1:1 canvas (1024x1024), NOT a rounded icon, with no text and no embedded corners.

Visual style:

- Apple iOS 26 design language
- Liquid Glass / Glassmorphism aesthetic
- Minimal, calm, premium, and professional
- Subtle depth, soft highlights, gentle translucency
- No harsh shadows, no outlines, no skeuomorphism

Icon concept:

An abstract "feedback coin" symbol:

- A soft circular or rounded disc centered on the canvas
- Inside the disc, a subtle abstract speech-bubble indentation or layered feedback shapes
- The symbol should feel refined, symbolic, and non-literal

Color palette:

- Calm blue to indigo gradient (soft, modern Apple-style)
- Slight frosted glass effect
- Very subtle light reflection from top-left
- Clean, neutral background with soft gradient or glass surface

Composition rules:

- Main symbol centered
- Occupies about 80–85% of the canvas
- Plenty of breathing room from edges
- No UI elements, no mockups, no device frames

Overall mood:

Trusted, modern, thoughtful, premium, Apple-quality app icon artwork.

Lighting:

Soft studio lighting, diffuse reflections, realistic glass material.

Output:

High-quality, polished icon artwork suitable as an App Store icon source image.
